## PRESS RELEASE

### FORESTALIA 2025: A CONNECTED FOREST FOR A SUSTAINABLE FUTURE

From October 24th to 26th, 2025, Piacenza Expo will host Forestalia, the trade fair dedicated to the agroforestry world, earthmoving, and renewable energies. An event that looks to the future of forests, combining innovation, sustainability, and the enhancement of the territory.

#### **A Smart Forest for a Sustainable Future**

Forestalia 2025 will focus on technological innovation applied to forest management. Artificial intelligence is revolutionizing the management of forest resources, optimizing processes and making forests even more resilient: this is an important and strategic appointment to stay in the market with the right relationships.

#### **Energy from the Forest, a Greener Future**

The energy transition also passes through wood. At Forestalia, you can delve into the latest trends in the wood-energy supply chain and discover how to best valorize biomass to produce clean and sustainable energy.

#### **Earthmoving and Forest Reclamation**

Forest management plays a fundamental role in preventing hydrogeological instability. At Forestalia, you will find innovative solutions for land care and environmental protection. The maintenance of the forest road network is essential to guarantee access to forests and facilitate management operations. At Forestalia, the most advanced earthmoving machinery for the care of paths and forest roads will be on display.

#### **A Green Europe, Starting from Our Forests**

Forestalia 2025 is part of the broader European context of forest policies, underlining the importance of sustainable management of forest resources to address the challenges of climate change and guarantee biodiversity.

#### **Focus on Inland Areas: A Future for Our Forests**

The event will give ample space to issues related to the inland areas of the country, where the forest represents a fundamental resource for economic and social development. The best practices for enhancing the forest heritage of these areas will be presented, creating new opportunities for local communities.

#### **Forest Mechanization: An Investment for the Future**

Mechanization is a key element for efficient and sustainable forest management. At Forestalia 2025, the most important part is the exhibition with the presentation of the most innovative machinery for forest operations, together with funding opportunities and incentives available to promote the renewal of the machinery fleet of companies in the sector.

**FOREST  
ENERGY  
WORK**

**What will be at Forestalia:**

- Exhibitions of state-of-the-art machinery, equipment, and technologies.
- Demonstration areas to get hands-on with the latest industry innovations.
- Conferences and workshops with internationally renowned experts.
- Space dedicated to wood crafts and non-wood forest products.
- Area dedicated to renewable energies and sustainable building.

**With the opportunity to:**

- UPDATE your knowledge on the latest industry news.
- MEET the main players in the Italian and European forest supply chain.
- DISCOVER how to contribute to a more sustainable future
